

SyteLine Value Assessment (SVA) by Godlan

Gaining Additional Value

Godlan's SyteLine Value Assessment (SVA) is designed to provide the often much needed health check of your ERP software and connected business systems. The goals of the SVA are:

- Identify opportunities for performance improvement
- Help establish priorities based on the magnitude of the opportunity versus the effort needed to achieve it
- Provide an objective "Level of Use" analysis of SyteLine ERP
- Improve overall use of SyteLine ERP
- Better alignment of business processes within SyteLine ERP to corporate objectives

Godlan's Professional Services Organization (PSO) will assess and analyze the SyteLine implementation and software usage at your company by major functional area: Purchasing, Sales, Shipping, Production, Accounting and IT. An onsite visit is necessary and included in the SVA. Our PSO team will evaluate the current SyteLine ERP functions and user perceptions, and identify improvement potential for SyteLine ERP and recommend actions.

Don't delay, give us a call or drop us an email today and ask about how an SVA can help your business!
